                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ; Search time 21.6234 Seconds (without alignments) 330.323 Million cell updates/sec
```

Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.

The present CC weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight CC and an amino acid composition corresponding to the copolymer. The CC polypeptides of the invention are used as molecular weight markers for CC platitamer acetate related terrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or CC antibody-mediated diseases. Such diseases include arthritic conditions, CC demyelinating diseases such diseases include arthritis, autoimmune compositions, osteoarthritis, autoimmune haemolytic canaemia, autoimmune oophoritis, osteoarthritis, autoimmune haemolytic canaemia, autoimmune disease, chronic immune thrombocytopaenia CC disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic CC myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic CC include host-versus-graft disease, graft-versus-host disease, and CC include molecular weights and physical properties which are analogous to CC glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          contributed by the present invention. The present convention describes polypeptides (I) for determining the molecular convention describes polypeptides (I) for determining the molecular convention and an amino acid composition corresponding to the copolymer. The copolymer copolymer (CP), which has an identified molecular weight can an amino acid composition corresponding to the copolymer. The copolymer acetate related tetrapolymers. The polypeptides may also be considered for treating and preventing immune diseases in a mammal. Autoimmune contibody-mediated diseases. Such diseases in clude arthritic conditions, contact sensitivity diseases include arthritions, e.g. multiple consensations, colitis, contact sensitivity disease, diabetes mellitus, draves conditions, colitis, contact sensitivity disease, diabetes mellitus, Graves contact sensitivity disease, diabetes mellitus, Graves concententinitis, crohn's disease, chronic immune thrombocytopaenia contact sensitivity disease, diabetes mellitus, Graves consensation, pemphigus vulgaris, or systemic concententinitis, austain agravis, psoriasis, pemphigus vulgaris, or systemic conclude host-versus-graft disease, graft-versus-host disease, and concenter weights and physical properties which are analogous to contact molecular weights and physical properties which are analogous to contact molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY82571 to AAY82577 represent specifically claimed copolymer molecular CC weight TV-marker polypeptides from the present invention. The present cinvention describes polypeptides (1) for determining the molecular veight of a copolymer (CP), which has an identified molecular weight cand an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for CC glatiramer acetate related tetrapolymers. The polypeptides may also be cused for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, cell-myelinating diseases and inflammatory conditions, e.g. multiple clerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thypoiditis, autoimmune CC ureoretinitis, Crohn's disease, chronic immune thrombocytopaenia colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic corrected or systemic in neorical sensitivity of the contact sensitivit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis;

                                                                              밁
                                                                                                             S
                                                                                                                                                                                                                                                                                        cc weight TV-marker polypeptides from the present invention. The present cinvention describes polypeptides (1) for determining the molecular cc weight of a copolymer (CP), which has an identified molecular weight CC and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for CC glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or creating diseases such diseases include arthritic conditions, cc antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple CC sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune CC uncertinitis, Crohn's disease, chronic immune thromocytopaenia CC uncortinitis, Crohn's disease, chronic immune thromocytopaenia CC myxoedema, mysathemia gravis, psoriaeis, pemphigus vulgaris, or systemic CC include host-versus-graft disease, graft-versus-host disease, and celined molecular weights and physical properties which are analogous to CC delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to CC glatiramer acetate molecules, which makes them ideal for use as

AAY82574
CC AAY82571 to AAY82577 represent specifically claimed copolymer molecular CC weight TW-marker polypeptides from the present invention. The present CC invention describes polypeptides (I) for determining the molecular CC weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The CC and an amino acid composition corresponding to the copolymer. The CC used for treating and preventing immune diseases in a mammal. Autoimmune CC used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, CC demyelinating diseases and inflammatory conditions, e.g. multiple CC elevates, autoimmune ophoritis, osteoarthritis, autoimmune hord commune cophoritis, cortact sensitivity disease, diabetes mellitus, Graves CC uveoretinitis, Crohn's disease, chronic immune thrombocytopaenia CC purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves C disease, Guillain-Barre's syndrome, Hashmoto's disease, diopathic cupus erythematosus. Mediated-mediated diseases which can be treated contact sensitivity disease, diabetes mellitus, Graves C lupus erythematosus. Mediated-mediated diseases which can be treated contact disease and disease 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antianaemic; immunosuppressive; demyelinating disease; osteoarthritts; inflammatory condition; multiple sclerosis; rheumatoid arthritis; crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Gullain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                      include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thyromimetic; haemostatic; antipporiatic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gad A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAY82574 standard; peptide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                         CC Weight TV-marker polypeptides from the present invention. The present convertion describes polypeptides (1) for determining the molecular convertion describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight convertion acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for conjugation acid composition corresponding to the copolymer. The copolymerides of the invention are used as molecular weight markers for conjugation of the copolymer. The conjugation of the copolymer of the copolymer of the copolymer. The copolymerides may also be used for treating and preventing immune diseases in a mammal. Autoimmune colleases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, e.g. multiple continating diseases and inflammatory conditions, e.g. multiple concentiation, autoimmune oophoritis, autoimmune thyroiditis, autoimmune haemolytic anaemia, autoimmune oophoritis, observathritis, autoimmune haemolytic conamina, autoimmune oophoritis, autoimmune thyroiditis, autoimmune collinates, collitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain, Barre's syndrome, Hashimoto's disease, idiopathic convertinitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain agravis, psoridasis, pemphigus vulgaris, or systemic conditions of the convertion have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyvoid; antiinflammatory; antidiabetic; theyromimetic; haemostatic; antipsoriatic; dermatological; antianaemic; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-APR-2000

                                                                                                                                                     To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1-19 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1994 US4651009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequence, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-19 contains oligonucleotide duplexes incoding the following segments: YKK, ABK, KRA, KRA, YEA, ARA KEA, and AAA. The remainal alanine residue is left behind following CNBr cleavage of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
